

Module 6: Sustainable Consumption-Shopping And Smart Home Applications

Activity: Smart Home Simulation

Objective: To introduce students to smart home technologies and sustainable consumption practices.

Instructions:

1. Set up a mock smart home environment in the classroom, demonstrating various eco-friendly technologies mentioned in Chapter 2.
2. Have students interact with the simulated smart home, making decisions to optimize energy and resource usage.
3. After the simulation, discuss the advantages of smart home applications and how they contribute to sustainable living.
4. Encourage a class debate or discussion about the importance of sustainable consumption and smart home applications in reducing environmental impact.
